

**South Atlantic
Regulatory Amendment 11
Removal of the 240-Foot (40-Fathom) Prohibition
Frequently Asked Questions
May 2012**

What does Regulatory Amendment 11 do?

- Regulatory Amendment 11 to the Fishery Management Plan for the Snapper-Grouper Fishery of the South Atlantic Region (Regulatory Amendment 11) removes the 240-foot (40-fathom) prohibition of six deepwater snapper-grouper species (snowy grouper, blueline tilefish, yellowedge grouper, misty grouper, queen snapper, and silk snapper) off the coast of the South Atlantic states.

What is the 240-foot (40-fathom) closure?

- Amendment 17B to the Snapper-Grouper Fishery Management Plan for the South Atlantic Region (Amendment 17B) implemented what is referred to as the “240-foot (40-fathom) prohibition.”
- Beginning January 31, 2011, possession of the six deepwater snapper-grouper species in or from the South Atlantic exclusive economic zone (EEZ) in depths greater than 240 feet (40 fathoms) was prohibited.

When will Regulatory Amendment 11 be effective?

- The removal of the 240-foot (40-fathom) prohibition of six deepwater snapper-grouper species is effective on May 10, 2012.

Why were the changes proposed?

- The purpose of the removal of the prohibition in Regulatory Amendment 11 is to reduce the socio-economic effects expected from the prohibition in Amendment 17B while maintaining the biological protection to speckled hind and warsaw grouper in the South Atlantic to the extent practicable.
- The purpose of the prohibition approved in Amendment 17B is to reduce discards of speckled hind and warsaw grouper. However, recent data analyses suggest speckled hind and warsaw grouper rarely co-occur with snowy grouper, blueline tilefish, yellowedge grouper, misty grouper, queen snapper, or silk snapper.
- The low association between warsaw grouper and speckled hind with blueline tilefish and snowy grouper in the South Atlantic may be attributable to the unique habitat preferences of these species. Speckled hind and warsaw grouper prefer hard bottom structure with relief such as steep cliffs, notches, and rocky ledges of the continental shelf break. Blueline tilefish inhabits irregular bottoms comprised of troughs and terraces intermingled with sand, mud, or shell hash bottom where they live in burrows.
- Even though yellowedge grouper, misty grouper, queen snapper, and silk snapper primarily share the same hard bottom habitat preference as speckled hind and warsaw grouper, these four species are rarely encountered and are not currently targeted by commercial or recreational fishermen.

Does the implementation of Regulatory Amendment 11 change the regulations for speckled hind, warsaw grouper, snowy grouper, blueline tilefish, yellowedge grouper, misty grouper, queen snapper, or silk snapper?

- The decision to eliminate the 240-foot (40-fathom) prohibition through Regulatory Amendment 11 does *not* affect the prohibition on harvest and possession of speckled hind and warsaw grouper in the South Atlantic. It remains unlawful to harvest or possess speckled hind and warsaw grouper.
- The regulations for snowy grouper, blueline tilefish, yellowedge grouper, misty grouper, queen snapper, or silk snapper have not been changed.
 - Queen snapper and silk snapper have a minimum size of 12 inches total length (commercial and recreational). These species are included in the 10 snapper per person per day aggregate bag limit (which does not include vermilion snapper).
 - The regulations for snowy grouper remain one per vessel per trip (recreational) and 100 pounds per trip (commercial).
 - Snowy grouper, blueline tilefish, yellowedge grouper, and misty grouper are included in the 3 fish per person per day aggregate grouper bag limit.
 - There is an aggregate bag limit of 20 fish per person per day inclusive of all species in the snapper-grouper complex, excluding blue runner and tomtate.

In the future, will new measures be implemented to protect speckled hind and warsaw grouper?

- The South Atlantic Fishery Management Council (Council) intends to continue to explore management alternatives to enhance the biological protections for speckled hind and warsaw grouper through Comprehensive Ecosystem-Based Amendment 3 (CE-BA3).
- The Council intends to approve CE-BA3 at their December 2012 meeting.

Who is affected by Regulatory Amendment 11?

- Commercial and recreational fishers who fish for snapper-grouper species in the South Atlantic EEZ (3-200 miles offshore) in depths greater than 240 feet (40 fathoms).
- Constituents fishing in northern and southern ends of the South Atlantic EEZ, off the coasts of Cape Hatteras, North Carolina, and the Florida Keys, respectively, expressed the greatest concern with the implementation of the 240-foot (40-fathom) prohibition. The constituents indicated the closure has created adverse economic and social effects.

Where can I get more information on actions in Regulatory Amendment 11?

- Regulatory Amendment 11 may be found online at the NOAA Fisheries Service Web site at <http://sero.nmfs.noaa.gov/sf/SASnapperGrouperHomepage.htm> and the South Atlantic Fishery Management Council's Web site at <http://www.safmc.net>.
